2026 Science Code of Respiration—Campus Hand-drawn Poster Exhibition Project Plan for Elementary School Students

Safeguarding Life with Scientific Principles
Responding to Public Health with the Power of Collaboration

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

I. Basic Information about the Event

- Event Name: The Scientific Code of Respiration—Campus Hand-drawn Poster Tour Plan for Elementary School Students
- Event Theme: Utilizing hand-drawn posters as a science popularization medium, targeting elementary school students aged 6–12 to break down knowledge regarding the respiratory system, daily epidemic prevention methods, and fundamental principles of synthetic biology pathogen detection, thereby establishing a whole-age science popularization chain.
- Event Type: ☑ Educational Science Popularization ☐ Public Welfare Service ☐ Cultural Promotion ☐ Community Service ☐ Other:
- Organizer: JLU-SPH Team

II. Event Objectives

1. Core Objective: To conduct lightweight, child-friendly science popularization themed around the respiratory tract for young elementary students, leveraging hand-drawn creations to bridge understanding thresholds in synthetic biology and pathogen detection (pathogen detection, English explanation: the process used to identify pathogenic microorganisms), thereby closing the gap in science outreach for younger age groups and helping children establish regular awareness in respiratory health protection.
2. Specific Goals:

○ Knowledge/Cognition: To recognize the structure of the human respiratory system (respiratory system, English explanation: the organ system responsible for gas exchange in humans), common respiratory-transmitted pathogens (pathogen, English explanation: an organism that causes disease), basic personal protective measures, and to gain a simple understanding of the principles behind biological sensor-based pathogen detection (biological sensor, English explanation: devices that detect specific biological substances).

○ Behavior/Skills: To develop skills in graphic-text layout, hand-drawn expression, information organization, and to learn how to use visual illustrations to communicate scientific knowledge.

○ Affection/Attitude: To eliminate children's fear of pathogens and detection devices, stimulate interest in life science exploration, and consciously develop hygienic habits such as frequent handwashing and proper mask-wearing.

3. Expected Outcomes:

○ Number of Participants: 30–50 elementary school students

○ Satisfaction Target: Above 90%

○ Collection of hand-drawn poster submissions, archiving at least 10 high-quality exhibition works, and creation of standardized science popularization graphic materials suitable for younger audiences.

III. Target Audience

- Core Audience: Elementary school students aged 6–12
- Audience Characteristics: At a critical stage of scientific enlightenment, dominated by image-based thinking, fond of colorful drawing; have difficulty understanding complex biological terminology; exhibit much greater acceptance of illustrated science than pure textual instruction, making them suitable for creative, hands-on science activities.

IV. Event Time and Venue

- Event Date: June 2, 2026
- Total Event Duration: Approximately 40 minutes

- Event Venue: Display wall outside elementary school classroom

V. Event Content and Procedures

[Event Overview]

Stage	Time	Segment Name	Specific Content	Personnel Responsible	Required Materials/ Photography Focus
Stage	**20 min**	Pre-class Science Popularization	Volunteers enter the classroom to conduct micro-popularization sessions, distribute blank poster templates and reference illustrations	Lead Instructor, Teaching Assistant	Popular Science PPT, Handwritten Poster Templates, Reference Images

Stage	7-day Creation Period + 1-day Selection	Submission and Categorization of Works	Unified collection of hand-drawn works from each class; the team selects exhibition pieces based on scientific value and creativity	Logistics Team	Storage bags for works, categorization labels
Main Stage	**10min**	Tour Exhibition Setup	Transporting and affixing posters	All Teaching Assistants, Logistics Team	Non-marking tape, colored sticky notes, markers
Main Stage	Break Time	Work Sharing and Peer Review	Team members stationed at exhibit zones to answer students' questions and guide them in writing viewing comments	Lead Instructor	Signature pens, sticky note paper
Conclusion Stage	**10min**	Event Summation and Questionnaire Collection	The lecturer summarizes the core concepts of innovation and distributes and collects activity feedback questionnaires.	Overall supervisor, teaching assistant	Storage bag, feedback collection form, small gifts

[Detailed Description of Each Segment]

- **Segment 1: Professional Explanation**
  - **Core content:** The lecturer uses schematic diagrams to explain the structure of the lungs, the principle of droplet transmission, the protective function of masks, and the project's biomedical testing technologies in accessible language. A standardized template for hand-drawn posters is distributed, with reference sketches provided. Students are guided to independently integrate three elements—respiration, epidemic prevention, and scientific detection—into their creations.
  - **Key statement:** "Pick up your pen and draw a scientific guardian for our breathing!"
- **Segment 2: Collection and Selection of Hand-drawn Posters**
  - **Core content:** The homeroom teacher collects all students' hand-drawn works, and the team selects entries for exhibition based on scientific accuracy of imagery, creative layout, and completeness of color. Works are categorized and labeled by class and student name.
  - **Key point:** Priority is given to works that are playful and clearly convey epidemic prevention knowledge; drawing skills are not the sole judging criteria.
- **Segment 3: Sharing and Peer Review**
  - **Specific content:** After arranging the exhibition, team members are stationed on-site, proactively explaining scientific knowledge embedded in the artworks to visiting students, distributing colorful sticky notes, and encouraging them to write their impressions.
  - **Key statement:** Every hand-drawn work carries a unique scientific code from the heart of each child; may everyone cherish their breathing and believe in science.

VI. Staffing and Division of Responsibilities

- **Overall supervisor (1 person):** Responsible for coordinating with school contacts, scheduling the exhibition tour, and handling onsite emergencies.
- **Lead lecturer (1 person):** Conducts micro-science activities in class and explains content related to respiration. Skilled in communicating to young children and familiar with the project's science popularization materials.
- **On-site teaching assistants (3 persons):** Answer questions and guide students in leaving comments during the exhibition.
- **Photography and logistics (2 persons):** Responsible for materials transportation, venue setup, and cleaning up at the end of activities.

VII. Inventory of Supplies

- Equipment:
  - Laptop computer, projector
  - Camera/High-definition smartphone
- Teaching materials:
  - Popular Science PPT
  - Blank templates for hand-drawn posters
  - Colored sticky notes for feedback
  - Activity feedback questionnaires

- Logistics:
  - Non-marking eco-friendly adhesive tape
  - Multicolor markers, black signing pens
  - Standard first-aid kit
  - Cleaning wet wipes, garbage bags

VIII. Risk Management Plan

- Personnel risk: Overcrowding during exhibition viewing may cause collisions or minor injuries among students. Immediately disperse the crowd, use the first-aid kit to provide care, and notify the homeroom teacher simultaneously.
- Venue risk: Prohibition of wall attachment or temporary cancellation of exhibition area. Switch to hanging works on corridor railings and adjust exhibition timing accordingly.
- Material risk: Loss or damage of hand-drawn posters. Photograph all works in advance for digital record; damaged works are replaced by backup entries for exhibition.
-

IX. Effectiveness Evaluation

- Process evaluation: Daily records of exhibition traffic, student engagement, and process execution are maintained throughout the exhibition tour.
- Satisfaction evaluation: Collect paper feedback questionnaires and conduct random on-site interviews with students to gather impressions; feedback is collected immediately at event end.
