JLU-SPH

2026 Campus Health Running Respiratory Health Science Communication Program Proposal

Safeguard life with the heart of science

Respond to public health through the power of collaboration

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

Ⅰ. Basic Information about the Event

- **Event Name:** Campus Health Run Respiratory Health Science Outreach
- **Event Theme:** Utilizing the campus health run as a setting, the event aims to conduct respiratory health science outreach for mobile participants, exploring strategies for science communication in exercise-related scenarios.
- **Event Type:** ☑ Public Service ☑ Health Education/Science Popularization ☐ Cultural Promotion ☐ Community Service ☐ Other:
- **Organizer:** JLU-SPH Team

Ⅱ. Purpose of the Event

1. Core Purpose: Integrating the campus health run setting, we aim to provide brief yet efficient respiratory health science education to mobile participants, embedding public health education into everyday exercise scenarios, thus breaking the stereotype that science outreach is limited to classrooms or lectures. Through questionnaires and one-on-one conversations, we will gather insights from young and middle-aged participants regarding post-exercise respiratory discomfort, household protection measures, and convenient testing methods. This will help us to understand public perceptions and evaluations of various detection and protective measures, enabling the development of reusable reference materials for science outreach in exercise contexts.

2. Specific Objectives:

- Knowledge/Cognitive Level: Enable health run participants to understand essential knowledge about respiratory protection during exercise and recognize the application of home-use rapid testing technologies and synthetic biology in the field of respiratory health.
- Behavioral/Skills Level: Collect authentic demands from young and middle-aged populations, investigate their real thoughts concerning post-exercise respiratory discomfort and household protection, and accumulate first-hand outreach and research data in real settings.
- Emotional/Attitudinal Level: Facilitate participants to experience how science outreach can be incorporated into daily exercise routines, and enhance public awareness and practice of respiratory health protection.

3. Expected Outcomes:

- Coverage: Mobile participants present at the Jilin University Campus Health Run
- Completion of the overall event workflow documentation and collection of feedback regarding event efficacy.

Ⅲ、Target Audience

- Core Audience: Individuals participating in the Campus Health Run in the South Qianwei Area of Jilin University
- Audience Characteristics: Physically active individuals who may encounter post-exercise respiratory discomfort; classified as a mobile population with brief dwell times, suitable for concise and fragmented health science outreach; demonstrates above-average interest in topics such as home-use rapid testing and household protection.

IV 、Event Timing and Location

- Event Date: May 1, 2026
- Total Duration: The entire duration of the health run event
- Location: Onsite at the Health Run event, South Qianwei Area, Jilin University

V、Event Content and Process

[Event Process Overview]

Stage	Time	Session Name	Content Details	Responsible Personnel	Required Materials
Phase	30 minutes prior to the event	Onsite Arrangement and Staff Training	Complete arrangement of event stations and placement of messaging materials; standardized staff training, ensuring familiarity with conversation protocols and communication boundaries	All Team Members	Promotional materials, paper/electronic questionnaires, documentation tools
Main Phase	Throughout the Health Run	Reception of Mobile Participants and Brief Science Outreach	Conduct concise outreach to participants during exercise breaks, explaining key knowledge of respiratory tract protection during exercise. Invite participants to complete questionnaires and engage in one-on-one communication, collecting opinions on post-exercise respiratory discomfort, household protection, and convenient testing.	All Team Members	Paper questionnaires, electronic questionnaire QR codes, data recording sheets
Final Phase	Event Wrap-up	Dismantling Event Stations and Organizing Content	Take down event stations, sort and collate questions raised by students, and archive all collected materials	General Supervisor, Logistics Staff	Storage tools

[Detailed Explanation of Each Session]

Session 1: Onsite Arrangement and Staff Training

- Core Content: Establish interactive science outreach stations in the health run rest areas, set up respiratory health themed exhibition boards, prepare paper questionnaires, QR codes for electronic surveys, and science outreach materials. Conduct staff training tailored to the characteristics of mobile participants, refining concise and rigorous science outreach scripts, and clarifying key points for research interviews.

Session 2: Reception of Mobile Participants and Brief Science Outreach

- Core Content: Provide fragmented science outreach for participants during exercise breaks or after the race. Based on the exercise context, explain the essential points of respiratory tract protection during physical activity and introduce current scientific information regarding convenient testing and household protection. Outreach remarks will be concise and clear,

- minimising the time taken from participants' breaks to suit the mobile nature of the audience. Interested faculty and students will be invited to complete research questionnaires and engage in short one-on-one conversations. We will collect authentic opinions of young and middle-aged participants on post-exercise respiratory discomfort, household protection, and home-use rapid tests, as well as record their real evaluations of various protective and detection methods, with a focus on collecting feedback relevant to home-use rapid tests and family-level protection measures.

VI、 Staffing and Division of Labor

- General Supervisor (1 person): Oversees the overall operation of the science outreach stations, coordinates with the main event organizers, maintains the pace of activities on site, and addresses unexpected circumstances related to crowd flow, weather, etc.
- Popular science presenters (2-3 individuals): Responsible for delivering short-term respiratory health education to mobile participants, disseminating essential information on protection and screening.
- Survey interview team members (2-3 individuals): Guide participants to complete questionnaires, conduct brief one-on-one interactions, and document opinions and feedback from the survey.
- Logistics & recording/photography (2 individuals): Manage onsite material arrangement and replenishment, facilitation of site withdrawal; capture onsite footage without disrupting activities, and organize questionnaire materials.

VII. List of Materials and Equipment

- Equipment:
  - Camera/high-definition mobile phone
- Science communication and survey materials:
  - Respiratory health education display board
  - Popular science promotional materials
  - Printed survey questionnaires
  - Poster with QR code for electronic questionnaires
  - Interview record forms
  - Communication prompt cards
- Logistics supplies:
  - Simple tables and chairs
  - Ballpoint pens
  - Garbage bags

VIII. Risk Management Plan

- Personnel risk: High onsite foot traffic with very brief participant stopovers. Staff are to strictly manage interaction time, prioritize concise popular science communication, refrain from coercing questionnaire completion, and fully respect participants' time.

- Venue risk: Outdoor events may encounter strong winds or rainfall. Secure display materials with weights, prepare rain-proof supplies; in adverse weather, prioritize maintaining online survey channels and reduce on-site displays.
- Survey risk: Participants may be reluctant to fill out questionnaires. Use brief oral interviews to collect fragmented viewpoints without forcing completion of full questionnaires.
- Communication risk: Complex technical questions posed by participants may not be answerable onsite. Record such inquiries and provide information on how to access further resources, refraining from giving unsubstantiated conclusions.

IX. Effectiveness Evaluation

- Process evaluation: Observe on-site participant engagement, listening, and involvement in the survey process; count the number of recovered questionnaires, and document core feedback from participants concerning home-use rapid testing and household protection.
- Satisfaction evaluation: Conduct brief oral interviews with willing participants engaging in communication to collect feedback regarding the science communication content.
- Review and documentation: Consolidate questionnaire data and interview records, archive multimedia and written materials from the event, summarize scientific communication activities in public sports settings, and generate reference models for similar campus sports science activities.
