JLU-SPH

2026 Streptococcus pneumoniae vaccine postpartum care center collaborative mini-class activity proposal

Guarding life with scientific integrity
Responding to public health with the power of collaboration

School of Public Health, Jilin University
School of Public Health Jilin University

1. Basic Information of the Activity

- Activity Title: Strengthening the Respiratory Defense, Safeguarding New Beginnings—Educational Session on Pneumococcal Vaccination for Confinement Center Staff
- Activity Theme: Mastering Knowledge of Pneumococcal Vaccines and Providing Professional Immunization Planning Guidance to Newborn Families
- Activity Type: ☑ Health Education & Science Popularization ☐ Public Welfare Service ☐ Cultural Promotion ☐ Community Service ☐ Other:
- Organizer: JLU-SPH Team

2. Purpose of the Activity

1. Core Objective: To enable staff at postpartum care centers (yuezi centers) to systematically acquire core knowledge regarding the pneumococcal conjugate vaccine (PCV13; 13-valent Pneumococcal Conjugate Vaccine), thereby allowing them to provide parents of newborns with scientific and accurate vaccination consultation.
2. Specific Objectives:

○ Knowledge/Cognitive Level: To guide staff so that in their daily work, they can proactively and accurately communicate to parents the importance of timely pneumococcal vaccine administration, answer basic questions, and improve parents' awareness and compliance in vaccinating against this serious but preventable disease.

○ Behavioral/Skills Level: To guide staff so that in their daily work, they can proactively and accurately convey to parents the necessity of timely administration of the DTP vaccine, answer basic questions, and increase parental compliance with vaccination.

○ Emotional/Attitudinal Level: To ensure that staff recognize vaccination against Streptococcus pneumoniae as an essential foundational measure to protect infant and young child health and to prevent severe infections, and are willing to actively assist families in completing their immunization schedules.

3. Expected Outcomes:

○ Coverage: All staff of the collaborating confinement center (estimated 15 participants)
○ Satisfaction Target: Above 90%
○ On-site Q&A participation rate of 100%; staff knowledge assessment pass rate ⩾95%

3. Target Audience

- Core Audience: All staff of the collaborating confinement center
- Target Characteristics: Possess basic knowledge in maternal and infant care; directly interact with newborn families in daily work; serve as a key channel for parents to obtain parenting and health information; emphasize practical and operational knowledge to facilitate subsequent information delivery to parents

4. Activity Time and Venue

- Activity Date: March 20, 2026
- Total Duration: Approximately 40 minutes
- Venue: Common Activity Room, Confinement Center

5. Activity Content and Process

【Activity Process Overview】

Phase	Time	Session Title	Specific Content	Responsible Personnel	Required Materials/Key Filming Points
Phase	10 min	Venue Setup and Materials Arrangement	Testing and adjusting projection and audio equipment; arranging training materials, pens, and test papers; posting posters	Lecturer + On-site Staff	Training materials, pens, test sheets, small posters, projection equipment
Main Session	20 min	Professional Explanation	To explain the severity of Streptococcus pneumoniae (pneumococcus) infection in infants and young children, the fundamental importance of primary immunization with the PCV13 vaccine, the standard vaccination schedule, safety profile, and common concerns. Information delivery should be guided in the context of postpartum care center ("yuezi center") scenarios.	Professional Lecturer	Instructional PowerPoint presentation, product samples, and core knowledge handbook.
Main Session	15 min	Interactive Q&A	Staff raise practical questions encountered at work, which are answered on-site by the lecturer.	Lecturer + On-site Staff	Q&A log notebook, pens
Main Session	5 min	Knowledge Assessment	Distribution of a brief test to assess staff knowledge; answers are reviewed on site after the test	On-site Staff	Test papers, pens, answer keys
Final Phase	10 min	Material Collection and Feedback	Collection of remaining materials and test papers, gathering staff suggestions and feedback regarding the session, distribution of small gifts	On-site Staff	Collection bags, feedback forms, small gifts

【Detailed Description of Each Session】

- **Session 1: Professional Explanation**
  - **Core Content:** Emphasize the significance of staff as health information disseminators; explain that Streptococcus pneumoniae is a major etiological agent of bacterial infections in infants and young children and its associated severity; provide a focused introduction to the protective value of the PCV13 vaccine, the recommended target population (infants and young children aged 6 weeks to 15 months), the standard immunization schedule, safety profile and management of common reactions; as well as guidance on how to concisely communicate the benefits of vaccination to families.
  - **Key Statement:** "Staff provide professional immunization planning consultancy to help parents understand and adhere to the national vaccination schedule."
- **Session 2: Interactive Q&A**
  - **Core content:** Staff are encouraged to actively ask questions, focusing on potential concerns encountered during work, such as "How should we respond if parents are worried about vaccine side effects?", "Can premature infants receive vaccinations on schedule?", "How should post-vaccination care be provided?", etc. The lecturer addresses each question in real time to ensure that every concern receives a clear response. Frequently asked questions are summarized and emphasized.
  - **Key communication:** When providing answers, adhere to principles of "professional, objective, and easy to understand," ensuring both professional accuracy and that staff can quickly grasp and convey information to parents. Do not exaggerate product efficacy, objectively explain protective effects, and guide parents to consult qualified vaccination institutions.

VI. Personnel Structure and Responsibilities

- **General Supervisor (1 person):** Overall coordination among cooperating postpartum care centers, lecturers, and on-site staff.
- **Main Lecturer (1 person):** Responsible for delivering mini-class sessions, facilitating interactive Q&A, and verifying knowledge tests.
- **On-site Staff (3 persons):** Responsible for venue setup, distribution and collection of materials, test papers, feedback forms, maintaining order, and assisting lecturers in conducting activities.
- **Photography & Logistics (2 persons):** Arrange supplies and take photographs during the event.

VII. List of Materials

- Promotional & Material Items:
  - Small Posters
- Equipment:

- ○ Laptop, Projector
- ○ Camera/High-Resolution Smartphone
- ● Educational Items:
- ○ Science popularization PowerPoint presentation (PPT)
- ○ Test Papers
- ○ Promotional Brochures
- ○ Course-Related Reflection Questions

VIII. Risk Mitigation Plan

- Equipment risk: Malfunction or irregular operation of projection or audio devices. Test equipment in advance and prepare backup devices; if equipment cannot be repaired, switch to “lecturer explanation + distribution of materials,” simplifying demonstration procedures while ensuring delivery of core knowledge.
- Knowledge transfer
- Order risk: During training, the postpartum care center may have emergency tasks and some staff may need to leave. Temporary departure of staff is permitted without forced retention; supplementary materials and answers will be provided later to those who left, ensuring the effectiveness of training is not compromised.

IX. Effectiveness Evaluation

- Process evaluation: On-site observation of staff participation and engagement in interactions; record participation in Q&A sessions and completion of tests.
- Satisfaction evaluation: Collect opinion forms filled out by staff, evaluate satisfaction with the mini-class, lecturer, and materials, and conduct random oral feedback with staff.
