JLU-SPH

2026 “Hundred Societies Recruitment Fair” Synthetic Biology Science Popularization Booth Plan

Protecting life with a scientific mindset

addressing public health challenges through collaborative efforts

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

I. Basic Information of the Activity

- **Activity Title:** Recruitment Science Popularization Booth for Synthetic Biology in the Hundred Societies Fair
- **Theme:** Utilizing the scenario of the university's Hundred Societies Fair, the event aims to popularize synthetic biology (synthetic biology) at a low threshold, establish a platform for scientific communication for multidisciplinary university students.
- **Type of Activity:** ☑Public Service ☑Educational Science Popularization ☐Cultural Promotion ☐ Community Service ☐Others:
- **Organizer:** JLU-SPH Team

II. Purpose of the Activity

1. Core Purpose: By leveraging the campus environment of the Hundred Societies Fair at universities, the event aims to transcend professional classroom boundaries, conduct science popularization of synthetic biology for students from various disciplinary backgrounds, introduce the team's research topics in an accessible manner, and attract students to engage in further study, discussion, and on-campus science outreach activities.

2. Specific Objectives:

- Knowledge/Cognitive Level: To enable university students from diverse academic backgrounds to understand the fundamentals of synthetic biology (synthetic biology) and the direction of the research projects, recognize the value of synthetic biology in technological innovation, social applications, and public health, and establish basic conceptual awareness.
- Behavioral/Skills Level: To build an open forum for scientific dialogue, encouraging students without a background in biological sciences to proactively ask questions and reflect on biotechnological issues from the perspectives of health, technology, and societal application.
- Emotional/Attitude Level: To eliminate the perceived professional barriers of synthetic biology (synthetic biology), stimulate interest in life sciences among students from various disciplines, and broaden their understanding of interdisciplinary scientific and technological innovation.

3. Expected Outcomes:

- Population Covered: Several hundred multidisciplinary university students.
- Comprehensive documentation of the activity process and feedback on its effectiveness will be completed.

III、Target Audience

- Core Audience: Undergraduate students from all majors at Jilin University
- Audience Characteristics: From diverse academic disciplines, some lack a background in the biological sciences; within the context of the Hundred Societies Fair, they are willing to visit the society booths proactively. Some students are interested in technological innovation, others in health and wellness, and all demonstrate a willingness to participate in open scientific communication and outreach.

IV. Event Time and Location

- Date: April 25, 2026
- Venue: Qianwei South Campus Sports Ground, Jilin University
- Total Duration: All-day session of the Hundred Societies Fair

V. Content and Process of the Activity

[Overview of Activity Process]

Stage	Time	Session Title	Detailed Description	Responsible Personnel	Required Materials
Stage	2 hours before the event	Booth Setup and Materials Preparation	Set up the booth, arrange display boards, test equipment models, science manuals, and adjust all display materials.	General Manager, Logistics Team	Science display boards, equipment models, science handbooks, promotional materials
Stage	40 minutes before the event	Personnel Division and Training	Specify booth staff responsibilities, organize communication scripts, and rehearse responses to frequently asked questions.	All booth staff members	Rehearsal question-and-answer drafts, stationery
Main Phase	Throughout the activity	Booth Reception and Open Science Communication	Engage passing students to stop and participate, provide brief explanations of the team's projects, and initiate interactive communications according to participants' interests.	All booth staff members	Displays, models, science manuals
Conclusion Phase	Event Wrap-Up	Booth Dismantling and Material Sorting	Dismantle the booth, inventory remaining materials; organize on-site questions, summarize frequently asked topics, and finalize activity documentation and archival records.	General Manager, Logistics Team	Storage tools

[Detailed Explanation of Each Session]

Session 1: Booth Setup and Preliminary Preparation

- Core Content: Complete the construction of the science popularization booth, set up display boards themed on synthetic biology (合成生物学, synthetic biology), real models of testing equipment, and organize all materials including science manuals. Conduct brief training for booth staff, develop two sets of communication strategies tailored for students with different academic backgrounds, and anticipate potential questions.

Session 2: Booth Reception and Science Popularization Interactive Communication

- Core Content: Attract university students passing by the playground to stop and visit, and briefly introduce the team's research direction. For students interested in technological innovation, focus on discussing the interdisciplinary applications of Synthetic Biology (合成生物学, Synthetic Biology); for students concerned with everyday health, start conversations from the perspectives of communal living on campus and daily health protection. Students are encouraged to raise any questions regarding health, technology, and societal applications.

VI: Staffing and Division of Labor

- General Coordinator (1 person): Responsible for the overall coordination of booth activities, liaise with the event organizer of the "Hundred Societies Recruitment Fair", maintain the overall pace of on-site activities, and handle onsite emergencies.
- Science Popularization Explainers (3- 4 persons): Provide brief scientific explanations for visiting students, conduct interactive communication in different settings, complete exit concept question verifications, and record on-site inquiries. Candidates need to be adept communicators and able to explain Synthetic Biology content in layman's terms to non-specialist students.
- Logistics Staff (2 persons): Responsible for booth construction, material placement, restocking, booth dismantling, and inventory management.
- Recording & Photography Staff (1 person): Responsible for taking photos and videos of the event, recording student feedback on site, and collating collected questions.

VII: Materials Inventory

- Equipment:
  - Camera/High-resolution Mobile Phone
- Educational and Display Materials:
  - Synthetic Biology (合成生物学, Synthetic Biology) Science Popularization Display Boards
  - Models of Testing Equipment
  - Science Popularization Brochures
  - On-site Question Recording Forms
- Logistics:
  - Signature Pens and Recording Paper
  - Garbage Bags

VIII: Risk Management Plan

- Personnel Risk: Excessive booth foot traffic may lead to insufficient reception capacity. On-site staff will undertake flexible division of labor, with some responsible for greeting and explaining, others for distributing materials. Students can be guided to read display boards independently and communication can be staggered as needed.
- Venue Risk: Sudden outdoor weather changes (strong winds, rainfall). Display boards should be pre-secured with heavy objects, and rain-proof materials prepared. In severe weather, coordinate with event organizers regarding alternative display formats.
- Communication Risk: Visiting students may ask highly specialized or difficult questions that staff cannot answer on the spot. All questions should be carefully recorded and contact information collected for follow-up.
- After further organization, answers should be provided to students afterwards; no casual or unsubstantiated responses should be given on-site.
- Material Risk: Science popularization brochures may run out early. Prepare QR codes for electronic versions of educational materials in advance, and guide students to access electronic copies when hardcopies are unavailable.

IX: Effectiveness Evaluation

- Process Evaluation: Observe and record the duration of student attendance and interaction at the booth; document the reception process. Collect and analyze responses to "exit questions" to assess participants' understanding of core concepts.
- Satisfaction Evaluation: Conduct random on-site oral interviews to gather feedback from visiting students regarding their experience.
- Post-event review and archiving: Summarize all on-site questions, identify frequently asked questions (FAQ), and establish an FAQ resource database; complete archiving of event images and written records, summarize booth reception, and provide a basis for optimizing subsequent similar science popularization activities.
