2026 Gentle Breeze Calms Minds · Interactive Plan for Sci-Tech Innovation in Respiratory Health

Protecting life with the heart of science

Responding to public health with the power of collaboration

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

I. Basic Information of the Activity

- **Activity Name:** Evening Breeze for Emotional Healing — Interactive Science and Technology Innovation for Respiratory Health
- **Activity Theme:** Leveraging incidental nighttime encounters under dormitory buildings on campus to conduct low-pressure science popularization (科普, science popularization) on respiratory health and synthetic biology (合成生物学, synthetic biology), and to create an informal, peer-based scientific dialogue space.
- **Type of Activity:** ☑ Public Welfare Service ☑ Science Education and Popularization ☐ Cultural Promotion ☐ Community Service ☐ Other:
- **Organizer:** JLU-SPH Team

II. Purpose of the Activity

1. **Core Objective:** To utilize natural scenarios of students lingering under the dormitory at night to conduct lightweight, non-clinical science popularization on respiratory health and synthetic biology; through situational roles, dialogue tasks, and short-term interactions, to transform complex scientific concepts into relaxed peer conversations, establishing an entry point for informal scientific dialogue, without replacing professional psychological support services.

2. **Specific Objectives:**

- Knowledge/Cognitive Level: To enable passing university students to understand basic knowledge related to respiratory health, comprehend application scenarios of synthetic biology (synthetic biology) in the field of respiratory health, and recognize the fundamental principles of related diagnostic techniques.
- Behavioral/Skills Level: To foster a low-pressure, spontaneous mode of communication, encouraging students to express their feelings actively, initiate everyday science topics, and experience scientific communication in informal settings.
- Emotional/Attitudinal Level: To integrate peer support, daily life rhythm, and science popularization, making students aware that scientific exchange is not limited to the formal classroom, and that everyday campus scenarios can also be scientific.

3. **Expected Outcomes:**

- Number of Students Covered: University students passing by the entrance of Xinmin No.9 Dormitory in the evening.
- Completion of comprehensive activity process records and effect feedback.

Ⅲ、Target Audience

- Core Audience: Enrolled university students of Jilin University.
- Audience Characteristics: Students returning to the dormitory in the evening, in a relaxed and leisurely state; no pressure for mandatory participation, with spontaneous encounters; some students may have concerns related to respiratory health or daily routines, are willing to engage in brief peer conversations, and are curious about everyday science topics.

IV. Time and Venue of the Activity

- Date of Activity: May 17, 2026
- Venue: In front of Xinmin No.9 Dormitory
- Time: Peak period when students return to the dormitories at night

V. Content and Procedure of the Activity

【Overview of Activity Process】

Stage	Time	Session Name	Specific Content	Responsible Personnel	Required Materials
Stage	30 minutes prior to the event	On-site Setup and Staff Training	Completion of site setup, placement of message materials; unified staff training to familiarize with dialogue tasks and communication boundaries	All Team Members	Message boards, sticky notes, marker pens, atmosphere decoration materials, training cue cards
Main Session	Peak Period of Nighttime Dormitory Return	Health Science Popularization and Scientific Topic Exchange	On the basis of relaxed conversation and psychological support, appropriately introduce topics such as dormitory ventilation, respiratory health, and synthetic biology (synthetic biology), addressing students' inquiries about diagnostic principles and application scenarios	All Team Members	Question recording forms
Final Session	Closing of the Activity	Dismantling of the site and content collation	Dismantle event setups, organize the various questions raised by students, and complete archiving of materials	General Person-in-Charge, Logistics	Storage tools

【Detailed Explanation of Each Session】

Session 1: On-site Setup and Pre-duty Staff Training

- Core Content: Complete the setup of activity points in front of the dormitory; conduct pre-duty training for staff, structure situational roles and dialogue tasks, and clarify communication scripts and boundaries.

Session 2: Spontaneous Reception and Anonymous Message Interaction

- Core Content: Conduct spontaneous interactions with students returning to the dormitory in the evening, without compulsory participation. Staff members engage in relaxed conversations in the capacity of peers, facilitating a low-pressure, burden-free communication atmosphere through games and role-play. Provided that the conversational atmosphere is conducive, naturally introduce daily-life topics such as dormitory ventilation and respiratory health, further extending to the applications of synthetic biology (synthetic biology), and patiently address questions raised by students on diagnostic principles, technical application scenarios, and other topics, while keeping thorough records of questions raised.

VI. Personnel Arrangement and Division of Work

- General Coordinator (1 person): Responsible for overall management of all station operations, overseeing the activity's pace, defining communication boundaries, and handling onsite contingencies.
- Interactive Science Popularization Team (3–4 persons): Conduct peer-to-peer interactive dialogues, receive visiting students, guide anonymous message posting, carry out science communication on respiratory health and synthetic biology (合成生物学, "synthetic biology"), and record students' questions; skilled in empathetic communication and awareness of communication boundaries.
- Logistics and Supplies Team (2 persons): Responsible for onsite setup, replenishment of materials, and packing up the station after the event.
- Recording and Photography (1 person): Record onsite activities without disturbing students, and collect as well as organize materials from messages and questions.

VII. List of Supplies

- Equipment:
  - Camera / High-definition Mobile Phone
- Display and Interaction:
  - Message Board
  - Colored Sticky Notes
  - Marker Pens
  - Onsite Question Recording Form
  - Communication Boundary Reminder Cards
- Logistics:
  - Simple Tables and Chairs
  - Garbage Bags

VIII. Risk Contingency Plans

- Venue Risks: Insufficient lighting during outdoor nighttime. Confirm station lighting conditions in advance and deploy simple ambiance lighting if necessary; in case of rain or strong winds, reduce the scale or duration of the activity.

- Communication Risks: Students raise overly specialized questions that cannot be answered onsite. Thoroughly record questions, retain feedback channels, provide responses after subsequent collation, and avoid delivering unsound science communication conclusions.
- Participation Risks: Low willingness among passing students to participate. Staff should be gentle and friendly, and refrain from compelling students to join.
- Use open-style message boards to attract students who voluntarily wish to stay.

IX. Effect Evaluation

- Process Evaluation: Observe onsite student engagement through staying, message posting, and dialogues, and compile statistics on various questions received, with a focus on those related to testing principles and application scenarios.
- Satisfaction Evaluation: Conduct brief oral interviews with students who are willing to communicate, and collect feedback on the activity experience.
- Review and Archiving: Organize anonymous messages and lists of student questions, archive image and text materials, summarize practices from informal campus science popularization, and provide references for future similar lightweight science communication activities.
