Guarding Life · Public Health

JLU-SPH 2026 Grassland Music Festival Interactive Voting Program Proposal

Safeguarding Life with Scientific Commitment

Responding to Public Health with Collaborative Strength

School of Public Health, Jilin University

School of Public Health Jilin University

I. Basic Information of the Event

- **Event Name:** Interactive Voting at the Grassland Music Festival
- **Event Theme:** Utilizing the leisure and open setting of the Grassland Music Festival, the event focuses on public interactive voting regarding diagnostic selection, exploring the public value of technology in real-world scenarios.
- **Event Type:** ☐ Public Welfare Services ☑ Educational Science Popularization ☑ Cultural Promotion ☐ Community Services ☐ Other:
- **Organizer:** JLU-SPH team

II. Event Objectives

1. Core Objective: With "How to choose diagnostics in different scenarios" as the central topic, the event leverages the relaxed atmosphere of the Grassland Music Festival to turn the subject of technological selection into a discussable daily topic accessible to the general public.

2. Specific Objectives:

- Knowledge/Cognitive Level: To help the public understand the characteristic dimensions and trade-offs associated with household respiratory diagnostic tools .
- Behavioral/Skill Level: To collect genuine expectations from the public regarding household respiratory diagnostic tools, and to document the value preferences for speed, accuracy, cost, and other dimensions.
- Emotional/Attitudinal Level: To foster an open and inclusive discussion atmosphere where different viewpoints are visible, guiding the public to consider the practical applications of biotechnology from their own lived experiences.

3. Expected Outcomes:

- Coverage: Faculty, students, and members of the public participating onsite at the Grassland Music Festival, Xinxin Campus of Jilin University
- Satisfaction Target: Over 90%

Ⅲ、Target Audience

- Core Audience: Onsite faculty, students, and attending members of the public at the Grassland Music Festival
- Audience Characteristics: Participants are in a relaxed, leisure-oriented music festival setting, primarily engaging in recreational experiences and joining spontaneously; most lack professional biological backgrounds but are willing to engage in light, enjoyable interactions, and to provide feedback on diagnostic tools based on their daily lives.Their own preferences and opinions.

IV. Event Time and Location

- Event Date: May 16, 2026
- Event Location: Athletic Field, Xinxin Campus, Jilin University
- Total Event Duration: Throughout the Grassland Music Festival

V. Event Content and Procedure

【Overview of Event Workflow】

Phase	Time	Segment Name	Specific Content	Responsible Personnel	Required Materials
Phase	2 hours prior to the event	Setup of Interactive Points	Install interactive voting boards, arrange topic display materials, voting paraphernalia, recording forms; complete setup.	General Supervisor, Logistics	Interactive voting boards, topic display panels, voting stickers, recording forms
Main Phase	Duration: Entire Music Festival	Onsite Guidance and Participation in Interactive Voting	Attract passing visitors to stop; explain event topics; guide participants to use voting stickers to vote on diagnostic selections in various scenarios.	Onsite Interactive Team Members	Voting stickers, voting boards, documentation of onsite interactions
Main Phase	During Event	Onsite Communication and Opinion Collection	Open dialogue centered on voting results, listening to participants' views from different perspectives such as speed, accuracy, cost, privacy; recording public expectations regarding household respiratory diagnostic tools.	Onsite Interactive Team Members	Opinion recording forms, pen and paper
Closure Phase	Event Wrap-up	Dismantling Interactive Points and Data Processing	Remove voting set-up, tally voting results, organize all opinions collected onsite, archive all materials and media.	General Supervisor, Logistics	Storage tools, photographic equipment, document templates
Main Phase	Duration: Entire Music Festival	Onsite Guidance and Participation in Interactive Voting	Attract passing visitors to stop; explain event topics; guide participants to use voting stickers to vote on diagnostic selections in various scenarios.	Onsite Interactive Team Members	Voting stickers, voting boards, documentation of onsite interactions

【Detailed Description of Each Segment】

Section 1: Interactive Station Setup and Pre-Event Staff Training

- Core Content: Set up interactive stations at the music festival site, install themed voting boards, boards explaining key topics, and prepare voting stickers and record forms. Conduct training for staff to ensure familiarity with discussion dimensions such as convenience, accuracy, cost, privacy, and usability, and to understand the characteristics of various diagnostic techniques.

Section 2: Guiding Public Participation in Interactive Voting

- Core Content: Provide gentle guidance to festival attendees passing by, introduce the discussion topic of "how to choose diagnostic tests for different scenarios", and explain differences in aspects such as time required, accuracy, operational complexity, and home usage scenarios for different tests, inviting participants to complete voting using stickers.

Section 3: Open Dialogue and Collection of Public Opinions

- Core Content: Initiate conversations with participants based on voting results displayed on the boards, listen to whether the public places more value on speed, accuracy, cost, privacy, or other practical demands, collect expectations from ordinary users regarding home respiratory diagnostic tools, and record on-site opinions.

Section 4: Dismantling and Archiving of Materials and Templates

- Core Content: At the end of the event, dismantle stations and inventory materials; collect data on voting distribution and collate on-site communication records; preserve voting boards and topic designs to form reusable templates for public value discussions, and complete archiving of all textual and visual materials.

VI. Personnel Allocation and Division of Responsibilities

- General Supervisor (1 person): Overall coordination of all interactive station duties, liaison with the grassland music festival organizers, management of communication direction on-site, and handling of unexpected situations such as large crowds or adverse weather conditions.
- On-Site Interaction Staff (3–4 persons): Attract visitors, explain discussion topics, guide voting participation, facilitate open exchanges on-site, and refrain from judging participants' choices.
- Logistics Staff (2 persons): Responsible for station setup, material replenishment, dismantling and packing; record event materials on-site via photos or video without disturbing participants.

VII. Materials Inventory

- Equipment:
  - Camera / High-Resolution Mobile Phone
- Interactive and Educational Materials:
  - Interactive Voting Board
  - Colored Voting Stickers

Opinion Recording Forms

  - Paper and Pens
- Logistics Supplies:
  - Garbage Bags

VIII. Risk Contingency Plans

- Personnel Risk: High foot traffic during the music festival with large crowds gathering over a short period. Staff should guide attendee flow, receive groups in batches, encourage free browsing of voting boards, and stagger exchanges to avoid congestion.

- Venue Risk: Outdoor high winds or rainfall. Secure displays with heavy objects and cover materials to prevent water damage; in severe weather, preserve electronic templates of the topics for offline and physical display after the event.
- Communication Risk: Participants may engage in persistent debates over the optimal diagnostic solution. Staff should reiterate the purpose of the event, clarify that there is no single standard answer due to various living scenarios and individual needs, and guide discussions toward prioritizing different requirements.
- Material Risk: Exhaustion of voting stickers. Prepare backup stickers; alternatively, use electronic forms as an additional voting channel.

IX. Effect Evaluation

- Process Evaluation: Count the number of voting participants, gather data on distribution across different dimensions (e.g., speed, accuracy, cost), and record on-site opinions and expectations from the public regarding home respiratory diagnostic tools .
- Satisfaction Evaluation: Conduct brief oral interviews with participants willing to engage, gathering feedback on their experience of the event.
- Review and Archiving: Organize voting data and interview insights, preserve voting boards and topic design templates, archive event materials, and provide reference for future public science outreach activities themed on the public value of diagnostic technologies.
