2026 Intangible Cultural Heritage Marbled Fan Companion Science Education Project Plan

Safeguarding Life with a Scientific Mind

Responding to Public Health through Cooperative Effort

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

I. Basic Information of the Activity

- **Activity Name:** Intangible Cultural Heritage Lacquer Fan Accompanying Science Outreach
- **Activity Theme:** Integration of intangible cultural heritage handmade crafts and life sciences outreach, using a low-stress, companion-based hands-on experience to deliver basic health knowledge to children with special needs.
- **Activity Type:** ☑ Public Welfare Service ☑ Education and Science Outreach ☐ Cultural Promotion ☐ Community Service ☐ Others:
- **Organizer:** JLU-SPH Team

II. Purpose of the Activity

1. **Core Purpose:** To visit Yulong Special Education School and combine the experience of making intangible cultural heritage lacquer fans with scientific literacy in life sciences. By utilizing handmade crafts as a nonverbal communication channel, scientific exchange is conducted through tactile materials, hands-on creation, and collaborative completion of works; participation is respected in diverse forms, allowing children with special needs the freedom to choose silence, observation, creation, or sharing, thereby exploring pathways for health science education suited to special-needs children.

2. **Specific Objectives:**

- Knowledge/Cognitive Objectives: During the companion-based hands-on process, to impart basic health and protective knowledge such as hand hygiene and ventilation using brief and clear language.
- Behavioral/Skill Objectives: To enhance sensory experiences and fine motor skills through marbling graffiti and fan-surface creation; to establish a low-pressure science outreach environment that does not enforce verbal expression and embraces diverse modes of participation.

- Emotional/Attitudinal Objectives: To provide a safe and low-stress activity environment, affording children with respect and companionship, and encouraging them to display their work and express their own ideas.
- **3. Expected Outcomes:**
- Number of Participants Covered: Approximately 30-40 individuals.
- To complete the overall process documentation and feedback evaluation for the activity.

III. Target Group

- Core Target Group: Children with special needs enrolled at Yulong Special Education School
- Characteristics of the Target Group: Individual differences in cognition and expressive ability; not all are adept at verbal communication, and are more receptive to sensory experiences and hands-on creation; some children are sensitive to noise and intense lighting; participation is flexible, with options for silence, passive observation, active creation, or voluntary sharing.

IV. Activity Time and Location

- Activity Date: March 11, 2026
- Total Duration: Approximately 50–60 minutes
- Venue: Classroom within Yulong Special Education School

V. Activity Content and Process

【Overview of the Activity Process】

Stage	Time	Session Name	Specific Content	Responsible Personnel	Required Materials
Stage	Before the Activity	School Coordination and Volunteer Pre-service Training	Communicate with special education teachers to understand emotional support and companion communication strategies; learn about the individual situations of participating children; plan arrangements with minimal environmental stimulus requirements	General Supervisor, all volunteers	Volunteer training cue cards

Stage	40 minutes prior to the event	Onsite Arrangement and Preparation of Materials	Arrange the classroom to control noise and avoid intense lighting; set up the complete set of safe materials for lacquer fan crafts; implement safety protection measures	All volunteers	Blank lacquer fans, safe water-based marbling materials, protective gloves and aprons, wet wipes, and first aid kits
Main Activity Stage	Throughout the Activity	One-on-one Accompanied Lacquer Fan Creation	Volunteers accompany each child one-on-one to assist them with signing their names, graffiti, and marbling creations; during the process, brief explanations regarding basic hygiene such as hand-washing and ventilation are provided	All volunteers	Craft materials, photography avoiding children's faces, documentation of works and activities
Main Activity Stage	Throughout the Activity	Embracing diverse participation and encouraging work display	Simplified language and interactive game tasks are employed at various checkpoints for science outreach, explaining fundamental concepts in health protection and synthetic biology, and conducting environmental protection practices, while completing collective tasks	All volunteers	Respecting children's choices to remain silent, observe, create, or share; children who wish to express themselves are encouraged to display their lacquer fan works and share their thoughts
Conclusion Stage	Activity Wrap-up	Review and Session Evaluation	Organize student works, collect activity feedback through discussions with special education teachers; conduct venue cleaning, organize materials, and archive all activity records	All volunteers	Storage Tools

[Detailed Explanation of Each Step]

Step 1: Preliminary Liaison and Pre-service Volunteer Training

- Core Contents: Engage in in-depth communication with teachers at Yulong Special Education School in advance to understand the individual characteristics and emotional triggers of participating children; systematically learn companion communication skills and emotional management; clarify activity principles: do not compel children to speak, respect various forms of participation such as silence, observation, and hands-on creation. Training cue cards should highlight key communication points.
- Key Phrase: We do not require you to speak; you may quietly work on your fan, and share your thoughts whenever you feel comfortable.

Step 2: Low-stimulation Site Setup

- Core Contents: Adapt and modify the classroom to minimize noise disturbance and avoid strong direct lighting. Choose safe, environmentally-friendly water-based marbling paints (水性漂漆, water-based marbling paint), aprons, and gloves. Create a space for crafts that is low-stimulation and provides a strong sense of security.

Step 3: One-on-One Companion Intangible Cultural Heritage Marbling Fans Craft Activity and Fragmented Science Education

- Core Contents: Volunteers provide one-on-one companionship, assisting children with signing their names, doodling, and marbling creations. Follow the child's pace, and impart basic health protection knowledge, such as handwashing and ventilation, using brief and simple language during craft intervals. Integrate science education into the accompaniment process without extended classroom lectures.
- Key Points: Follow the child's pace; do not urge artistic creation or require verbal responses.

Step 4: Diverse Participation Acceptance and Work Display

- Core Contents: Accept children's varying states of participation; allow some children to simply observe without partaking actively. Encourage those willing to display their marbled fans and share their ideas, with no uniform requirement.

Step 5: Activity Conclusion, Collection of Teacher Feedback, and Archiving of Materials

- Core Contents: Organize children's marbled fan creations; conduct interviews with special education teachers to collect feedback and suggestions regarding the low-accompaniment, craft-centric science education approach; complete site cleaning and organize all activity records.

VI. Personnel Allocation and Division of Labor

- Overall Supervisor (1 person): Liaises with special education school, oversees the entire activity, manages on-site rhythm, and handles children's emotions and emergencies.
- Several Volunteers: Provide one-on-one companionship, assist children with marbled fan crafts, disseminate fragmented basic health knowledge, and respect different participation states.

VII. List of Materials

- Equipment:
  - Camera/HD smartphone (Photographing requires school permission, with child privacy protection.)
- Craft Teaching:
  - Blank marbled fan surfaces
  - Safe water-based marbling paints
  - Disposable protective gloves, aprons
  - Volunteer communication training cue cards
  - Teacher feedback record forms
- Logistics and Safety:
  - Standard first aid kit
  - Cleaning wet wipes, garbage bags
  - Light-blocking and noise-reducing auxiliary materials

VIII. Risk Contingency Plans

- Personnel Risks: Children may exhibit emotional agitation or resistance to participation. Volunteers do not force interaction and accompany according to special education teacher guidance, immediately notifying school special educators for intervention.
- Material Risks: Paint may contact skin, mouth, or eyes. Provide wet wipes and safety reminders in advance. If paint enters eyes or mouth, immediately wash under the guidance of special education teachers and seek medical assistance if necessary.

IX. Effect Assessment

- Process Documentation: On-site observation of children's participation states; recording forms of participation including creation, silence, observation, and voluntary sharing.
- Satisfaction Evaluation: Interviews with special education teachers to collect feedback on the format and suitability of science education activities.
- Review and Archiving: Organize teacher feedback, document companion science education practices, archive written and visual activity materials, and summarize feasible health education approaches for special groups.
