2026 “Baby’s First Safety Detection Radar” Rapid Prenatal Examination Waiting Area Flash Mob Proposal

Protecting life with scientific rigor

Responding to public health with collaborative strength

School of Public Health, Jilin University

School of Public Health Jilin University

JILIN UNIVERSITY · SCHOOL OF PUBLIC HEALTH

Ⅰ、 Basic Information of the Event

- Event Name: "Baby's First Safety Detection Radar" Antenatal Fast-Track Pop-up Event
- Event Theme: From Anxiety to Empowerment—Accompanying Expectant Mothers During Antenatal Waiting Time with Wu-Shi (无式, Wu-Shi Technology) Bedtime Science Stories
- Event Type: ☑ Health Education and Science Popularization ☐ Public Welfare Service ☐ Cultural Promotion ☐ Community Service ☐ Others:
- Organizer: JLU-SPH Team

Ⅱ、 Event Purpose

1. Core Objective: To utilize touchless audio (touchless audio) for science popularization on synthetic biology detection technologies, enabling pregnant women to understand that, in the future, "CRISPR biosensors" (CRISPR biosensors) may be used to screen for pathogens. This aims to transform the "fear" of neonatal illness into a sense of "empowerment" through advanced technological tools.
2. Specific Objectives:
   - ○ Knowledge/Cognitive Level: To enable pregnant women to understand the vulnerability of neonatal early immunity and to recognize how synthetic biology-based detection technologies (e.g., rapid test strips utilizing specific recognition, can achieve "early warning without invasive sampling."
   - ○ Behavioral/Skills Level: To scan a QR code and use their own mobile phones to listen to audio content; to participate in interactive activities on the "Scientific Wishing Wall."
   - ○ Emotional/Attitudinal Level: To alleviate pregnant women's anxiety regarding neonatal hygiene post-discharge, and to build anticipation and confidence toward "decentralized diagnostics" .
3. Expected Outcomes:
   - ○ Number of Participants Covered: 30 waiting pregnant women
   - ○ Satisfaction Target: Over 90%
   - ○ Average backend audio listening duration exceeds 2 minutes; at least 30 "Scientific Wishing Wall" sticky notes to be collected and replied to

Ⅲ、 Target Audience

- Core Target: Pregnant women waiting for antenatal consultation at outpatient clinics
- Audience Characteristics: Experiencing boredom and susceptibility to anxiety while waiting; highly concerned with hygiene and privacy; require joint family decision-making

Ⅳ、 Event Date and Venue

- Event Date: March 28, 2026
- Total Event Duration: Approximately 40 minutes
- Event Venue: Outpatient waiting hall of the Obstetrics and Gynecology Hospital

Ⅴ、 Event Content and Process

[Event Process Overview]

Stage	Time	Name of Segment	Specific Content	Responsible Personnel	Required Materials/Key Points for Filming
Stage	**10 min**	Venue Setup + Material Placement	Quietly set up roll-up banners and the Wishing Wall.	General Coordinator, Support Staff	Roll-up Banner, Wishing Wall
Main Stage	**5 min**	Segment 1: Brochure Distribution	Distribute educational brochures and guide pregnant women to participate in the next segment.	Guide Personnel	Brochures
Ending Stage	**10 min**	Data Recording and Event Dismantling	Sort and collect sticky notes; restore the venue to its original state.	On-site Staff	
Main Stage	**15 min**	Segment 2: Wu-Shi Audio Experience + Scientific Wishing Wall Interaction	Pregnant women are encouraged to listen to the stories and write down their concerns, to which the team will respond with a SynBio (synthetic biology) letter.	Lecturer, Guide Personnel	Sticky Notes, Pens

[Detailed Description of Each Segment]

- **Segment 1: Brochure Distribution**
  - **Core Content:** Distribute popular science leaflets on home biosafety detection, comparing mercury thermometers with synthetic biology-based detection devices
  - **Key Communication:** In the future, technology will enable us to avoid waiting for babies to develop a fever before going to large hospitals for blood draws and long lines.
- **Segment 2: Wu-Shi Audio Experience and Scientific Wishing Wall**
  - **Core content:** Placement of a retractable banner: "The First Popular Science Bedtime Story for Your Unborn Child." Pregnant women can use their own mobile phones to scan the code and

- listen. At the same time, they are invited to write their concerns regarding their future baby's health on the wishing wall. Team members subsequently attach reply notes with answers beside the posted concerns.
- **Interaction format:** ☐ Explanation ☐ Demonstration ☐ Group Discussion ☐ Game ☑ Hands-on Practice ☑ Q&A

Ⅵ、Staffing and Division of Labor

- **General Supervisor (1 person): Overall coordination**
- **Main Presenter (1 person):** Real-time responses to pregnant women's questions
- **Guide (1 person):** Smiling guidance for code scanning, attaches prepared replies to the wishing tree

Photography and Logistics (2 persons): Arrangement of supplies and photography during the event

Ⅶ、 List of Materials

- Scientific leaflets for home testing
- Audio story QR code + Scientific Wishing Wall display board
- Sticky notes

Ⅷ、 Risk Contingency Plan

Venue risk: In the event the venue becomes temporarily unavailable, activate the backup venue; confirm backup venue availability in advance

Risk: Potential misinterpretation as promotional activity. Clarify the identity as a public welfare popular science event; do not promote any physical products.

Ⅸ、Effectiveness Evaluation

- Process evaluation: On-site observation and documentation
- Satisfaction assessment: Distribution of questionnaires, collection of verbal feedback
